

# Dataset: Historic Nashville City Interments 1846-1979

**What medical and societal advances have led to the reduction and eradication of several of the Top 10 Causes of Death and observed infant mortality rate as identified in the Nashville City Cemetery dataset?**

1. Widespread availability and adoption of vaccines to prevent disease have delivered dramatic results in the significant reduction or eradication of diseases like: Cholera, Consumption (Tuberculosis), and Typhoid.
2. Advances in preventative medicine (e.g. well-women and prenatal care), availability of clean water, safer food sources, and more hygienic surgical practices have led to significant reductions in the infant mortality rate.
